

MF-414 SERIES

Medium flow Pressure Reducing Regulator
Piston Sensed for outlet control to 414bar / 6000psi

The MF-414 is a medium flow piston sensed pressure reducing regulator, which incorporates a balanced main valve to provide stable control under varying inlet pressures. The regulator has the option of a PEEK seat for gas service, or 17-4SS for hydraulic service. Both designs have a segregated captured vent to allow pressure reduction of the outlet pressure through a 1/4 NPT port on the side of the regulator body.

APPLICATIONS:

- Valve Actuator Control
- Large diameter pipe testing
- Gas compression systems
- Automated pressure cycling
- Aircraft charging carts

FEATURES:

- 414bar / 6000psi inlet pressure
- Precision machined sensing elements
- Load bearings and large handwheel for low torque adjustment
- Excellent sensitivity
- Self venting and non venting options
